The International Federation of Biomedical Laboratory Science (IFBLS) is the world's widest global voice of biomedical laboratory scientists. The IFBLS was established in 1954 and is an independent, non-governmental association of national professional associations of biomedical laboratory scientists. It is an international group of scientists focused on improving global healthcare through the science and practice of laboratory medicine.

The IFBLS provides a platform for the exchange of information and knowledge, and the promotion of the standards and competencies of biomedical laboratory scientists in diagnostic and preventive health care. The IFBLS is also dedicated to promoting the role of laboratory scientists in public health and policy development.

The IFBLS provides a variety of resources and initiatives to support the professional development of laboratory scientists, including educational programs, networking opportunities, and advocacy efforts. The IFBLS also aims to increase the recognition and status of laboratory science as a profession and to contribute to the advancement of science and technology in the field.

The IFBLS encourages collaboration and cooperation among national associations and is committed to promoting the values of the profession, as well as the ethical and professional development of its members.

The IFBLS website is an important resource for its members and the broader biomedical laboratory community. It offers a range of educational materials, networking opportunities, and resources to support the professional development of laboratory scientists. The IFBLS is dedicated to providing a platform for the exchange of information and knowledge, and the promotion of the standards and competencies of biomedical laboratory scientists in diagnostic and preventive health care.
